REASON 01

Regulatory Architecture

Under-13 data collection requires separate consent infrastructure under COPPA. State laws in California, Connecticut, and Maryland now extend age-appropriate design requirements to teens. A tab inside the adult app cannot satisfy these frameworks.

REASON 02

Brand Psychology

Teens don't want "kids mode" inside their parents' app. They want their own thing. That's the difference between adoption and abandonment. A separate experience signals respect — it says this was built for you, not adapted for you.

Their Preferences Are Specific. Starbucks Is Built for Them.

Gen Z doesn't discover food the way their parents did. They discover it on their phones, choose it for how it photographs, and share it before they taste it.

WHAT DRIVES THEIR CHOICES

Customization

85% add creamer or flavor. Driven by aesthetics, not just taste.

Visual-First

Drinks chosen for how they photograph. Color and layers matter.

Social Proof

They order what their feed tells them to. Peer influence is the menu.

Exclusivity

Limited drops create urgency. Sneaker culture applied to beverages.

Community

Shared experiences over transactions. Belonging over brand loyalty.
